General information about the Windows Mobile client

The client app for mobile devices running Windows 10 Mobile is available for free on the [Microsoft Store](#).

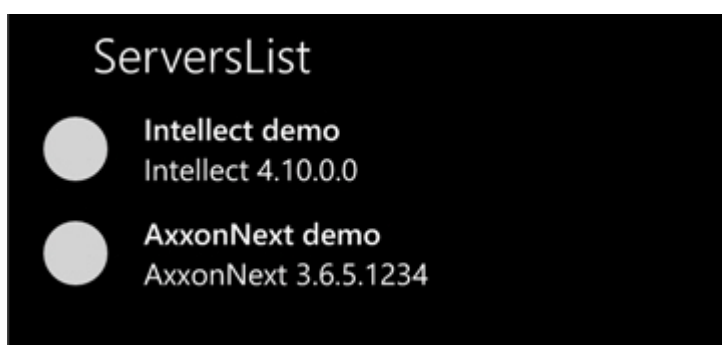

The client for iOS devices allows connecting to Axxon Next servers (version 3.6 and later) and Intellect servers (version 4.9.0 and later).

The client allows viewing both live and archived video.

Connecting to the server and working with servers in the Windows Mobile client

Configure the Web server in the appropriate software package before connecting to the Server (see [Configuring the web server](#), [Configuring the server for the clients connection via the Web-server 2.0 module](#)).

When you start the software for the first time you can connect to the *Intellect* and *Axxon Next* demo servers to see your Client's capabilities.

Add a new server as follows:

1. Click the  button.
2. Set server connection parameters:
 - a. Enter the Server name (**1**).

Add server

Configure connection to web server

Name

Server 1

Url

192.168.0.1:8085/web2 2

User

User 3

5

Save Cancel

- b. Enter the URL server address in the format http://<IP address of Axxon Next server>:<Port>/<Prefix> (2).

Note

Example URLs with standard Server settings for Axxon Next and Intellect:

Axxon Next: 192.168.0.10:8000/asip-api

Axxon Intellect: 192.168.0.10:8085/web2

- c. Enter the user name and password for connecting (3-4).

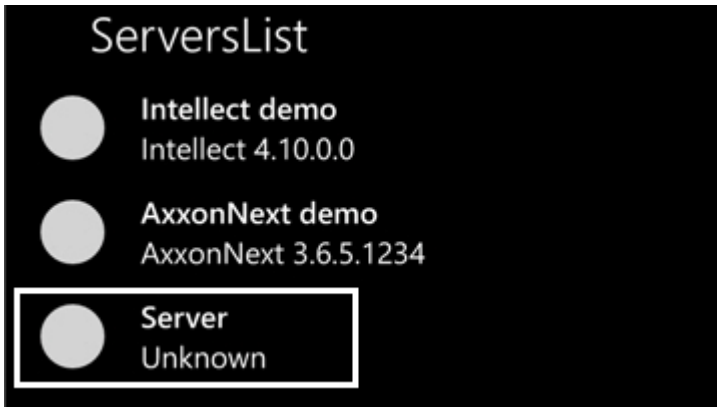

Note

To perform a basic check of the web server connection and operability, in a browser on your mobile device, go to the Server's URL address (see paragraph 2b).

3. To save the server, tap the **Save** button (5).

The server is added to the list.

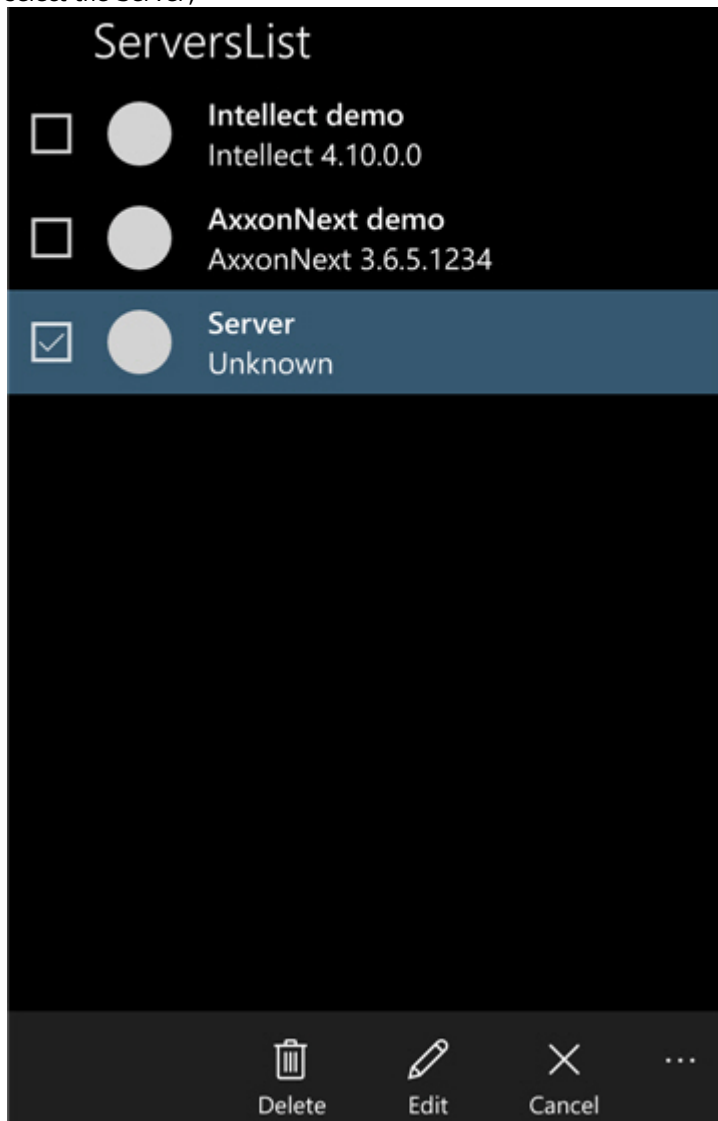

To connect to the Server select it in the list.

Note

To get back to the list of Servers click the  button.

To go to the Server settings:

- click the  button.
- select the Server;

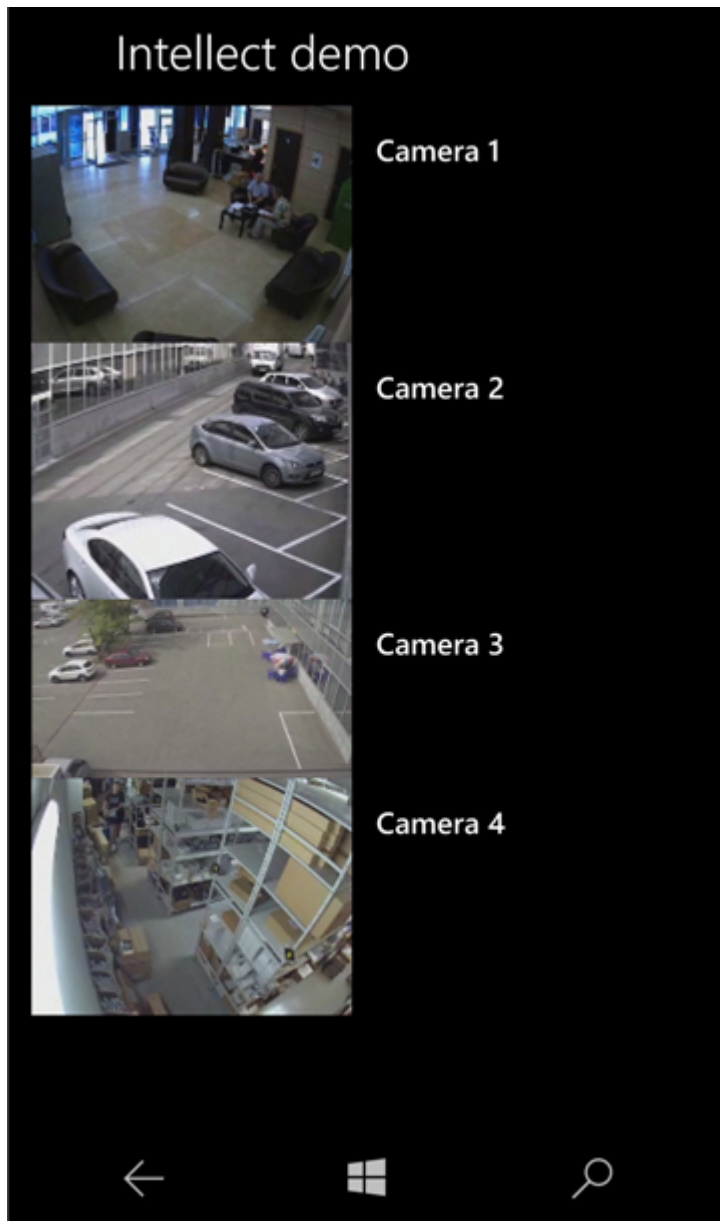

- Click the **Edit** button.

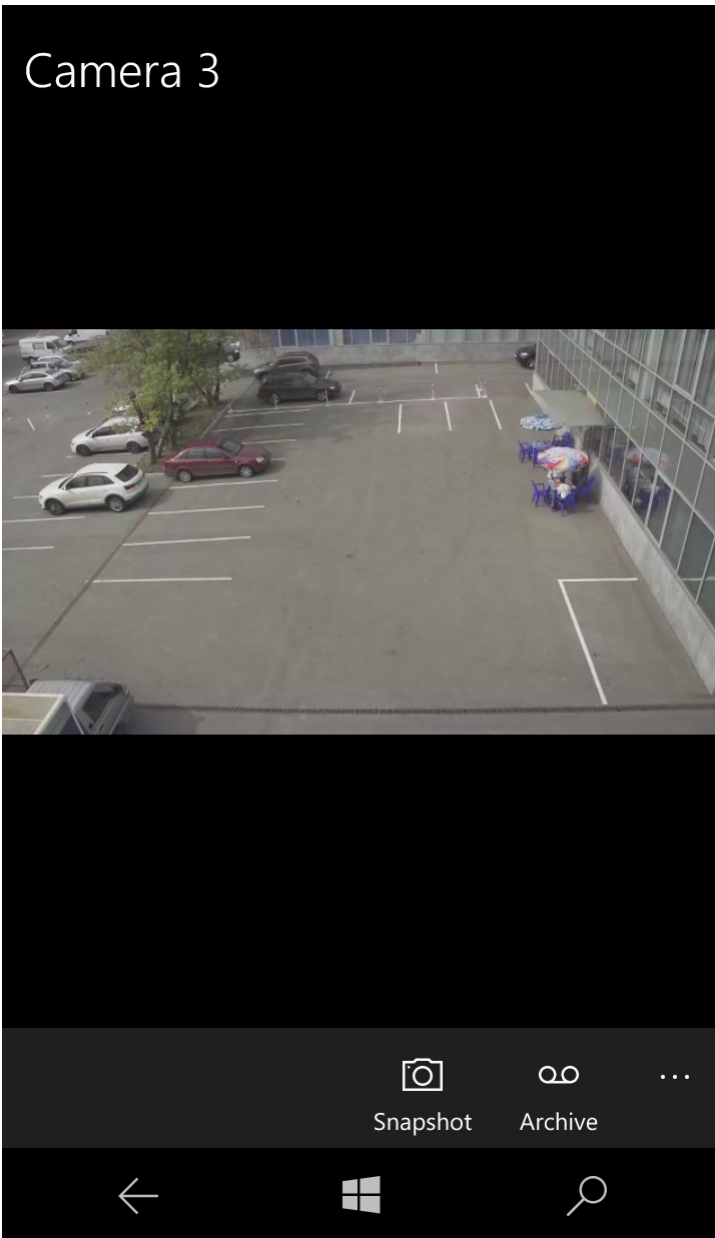

To delete the Server click the **Delete** button.

Viewing live video in the Windows Mobile client

The list of available cameras with video preview appears after connection to the Server is performed.

The viewing tile in full screen mode opens when clicking a camera.

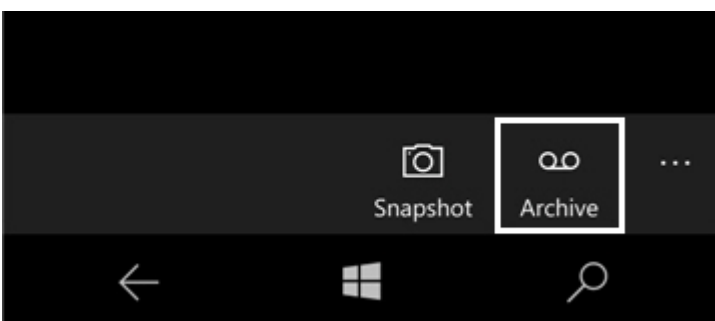

To make a video snapshot click the **Snapshot** button, to get back to the list of cameras click the  button.

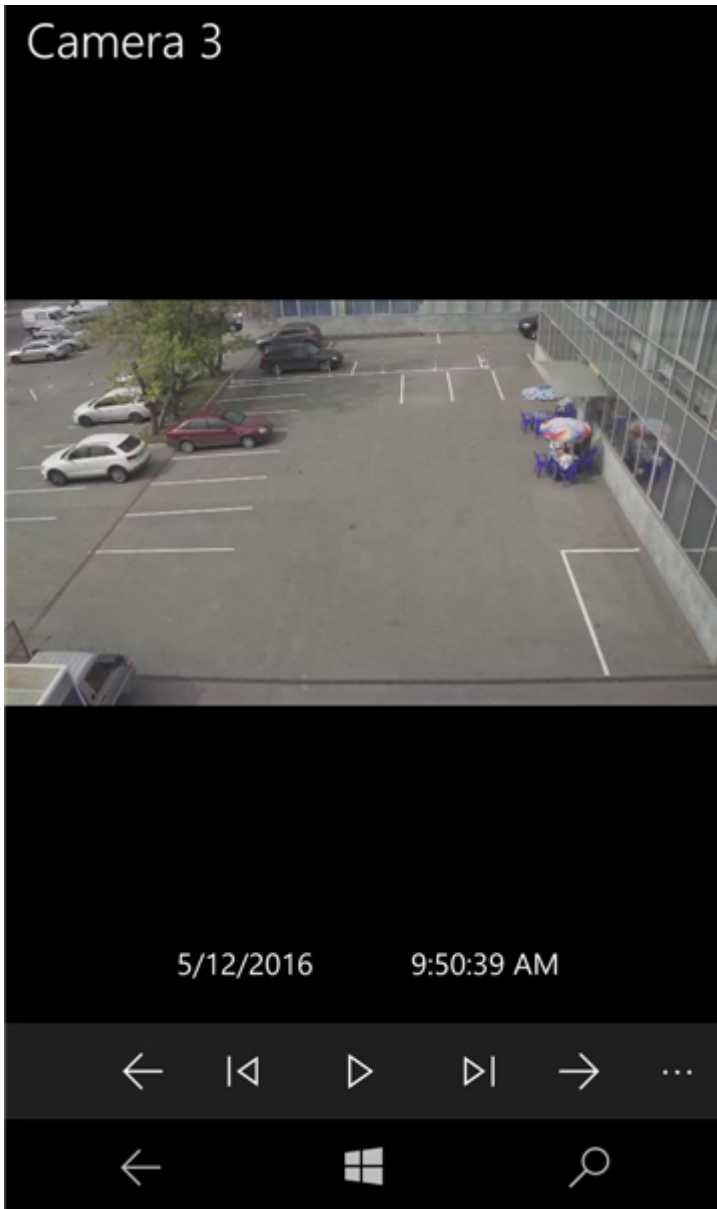

Note
Camera audio is not accessible in the mobile client.

Viewing previously recorded video in the Windows Mobile client

To view video archive in the Android mobile client select a required camera in the list and tap the **Archive** button.

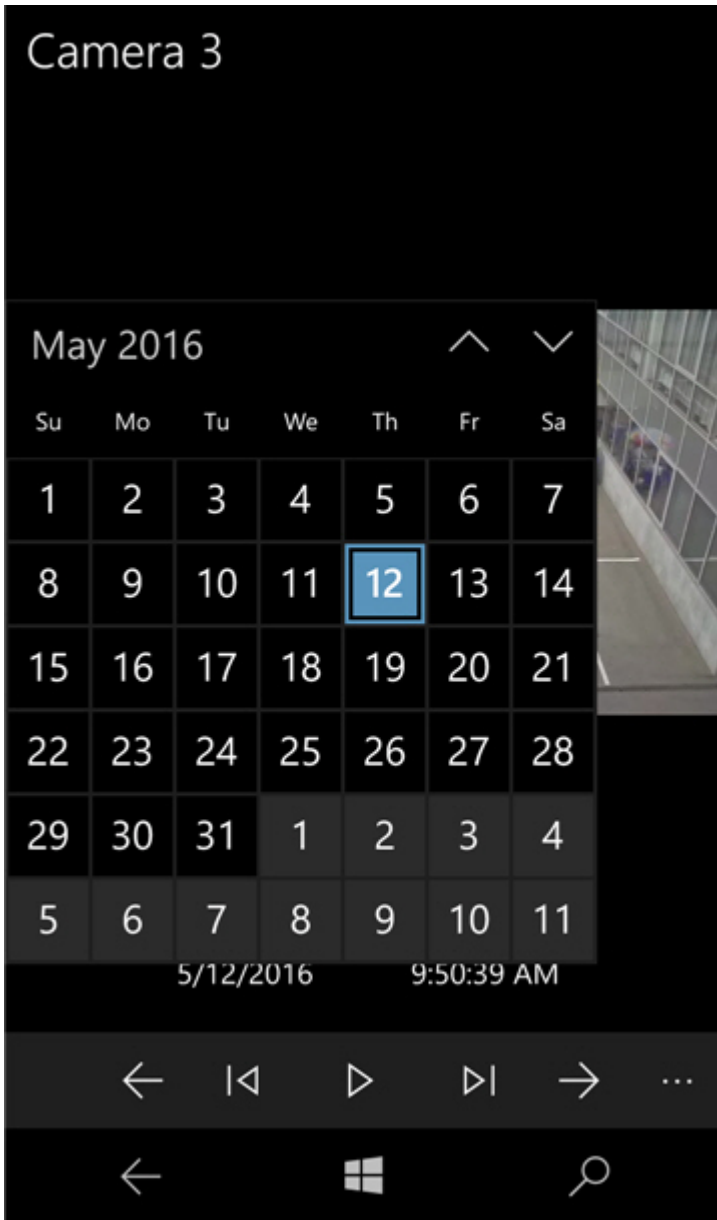

Archive view mode.

Video playback is controlled using these buttons:

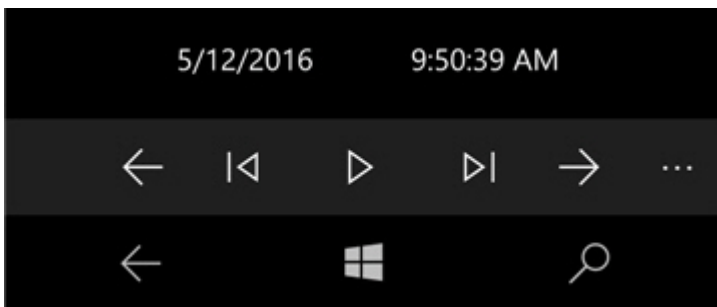

1. Play recording: ;
2. Pause playback: ;
3. Go 10 minutes back ;
4. Go 10 minutes forward ;
5. Go to the archive beginning - to the first recorded video ;
6. Go to the archive ending - to the last recorded video .

To navigate the archive click the time and date form and select the required time.

Hints in the Windows Mobile client

By default buttons are displayed in the Windows Mobile client without any description.

Click  to show these descriptions.
