

Auto-Uragan module licensing

There are two types of license for **Auto-Uragan** program module:

1. Slow.
2. Fast.

See [The Auto-Uragan module functionality](#) for more details.

Licensing of **Auto-Uragan** module is performed by moving lanes. For example, the Uragan Fast 2 allows using of two cameras, each of which controls one lane, or one camera controlling two lanes.

Selected area of recognition is considered while licensing if it is specified in settings of the **Auto-Uragan** program module. The whole frame is considered if area of recognition is not specified. Detailed information about specifying areas of recognition is presented in the [Setting the LP number search area border](#) section.

There is an electronic hardware security key for the **Auto-Uragan** program module (*Guardant* and *Hasp* correspondingly). The key can be remotely updated when it is required (to expand the permanent key or convert demo key to the permanent key).
